

Current Recommendation for racks in the SRCF:

The APC 3150 or the 3350 rack.

Dell is now reselling one APC rack, a rebranded APC 3100.

A key advantage of these racks is that they are available for order from the SMARTMART Dell punchout process and usually are available quickly and the price includes shipping.

Below are the details on the APC 3150, 3350 and Dell's rebranded APC 3100.

The APC 3150 is wide and normally deep, the 3350 is wide and deep, while the Dell 3100 is narrow and normally deep.

The offering of APC racks with Dell branding is just starting. I expect that more versions of the APC racks will have Dell branding, particularly the 3150 and 3350 racks. When complete these rebranded racks tend to be offered at a lower price.

In the mean time, keep checking the punchout for the most up to date offerings and prices. Any of the three racks mentioned will work at the SRCF, we've found the wide and normally deep rack is an optimal design for the typical server node setup.

**Description**

**American Power Conversion NetShelter SX 42U Deep Enclosure**

Qty 1  
Unit Price \$1,854.63

Manufacturer Part# AR3350  
Dell Part# A7042376
